## **Customer Reviews**

This has some good information. The ones that I found helpful were some lab values, assessing lung sounds, head to toe assessment, IM sites, household and metric equiv., some of the medical abbreviations and odor assessment. I wish that all of the lab values that I deal with at the hospital for clinical every day were in here. I felt like the space used for cranial nerves could have been utilized for something a little more commonly used. In med-surg I've never had to even think about

cranial nerves, but lab values play a huge role. Knowing what I know now I would definitely buy it again though.

Good information for all science students.

Great tool for school! Great

Quick and easy cheat sheet for bio.

This is a great cheat sheet for work and clinicals in nursing school. I first saw this used by a nurse at my job and decided to get this for myself to carry with me to use while I am in school on my way to become a nurse. I love it. It has everything I need. I wish I could have had it sooner. Most of the time my friends have just wrote things down on a sheets of paper or note card to carry around with us, but this is more efficient and less likely to be lost or torn.

helpful

Another great nursing quick resource to have on hand, especially for new nurses. It is full of information on assessing lungs, sounds, EKG, insulin, cranial nerves, calculating IV drip rates, and scoring for GCS and pressure sores. Many other assessment aides to that new grad.

Great for quick reference on clinicals and even when in class. Looks better than anything I could make on my own and is much faster than scrolling or searching through an ebook, or even a real book.
